OSTEO · SYSTEM

MBST Magnetic Resonance treatment couch for **whole-body treatment of bone tissue**

Diseases of the osseous structures often concern the entire skeletal system. To treat the ensuing indications effectively, the therapeutically usable treatment area has to be expanded to include the whole body.

The MBST OSTEO-SYSTEM has been developed especially for these requirements.

The magnetic resonance applicators in the therapy device build up the treatment area from the lying surface to up to 35 cm.

The proven OSTEO-SYSTEM therapy device enables the gentle and safe treatment of the osseous structures. Indications are for example osteopenia and osteoporosis.

These special whole-body treatments always include 10 therapy sessions. One therapy session lasts 60 minutes. Meanwhile the patient can for instance read, listen to music or even sleep.

■ Height of magnetic resonance field approx. 35 cm

The patented medical technology of the MBST therapy device in TÜV-certified quality complies with current EU norms and can be used for all age groups.

MADE IN GERMANY
