ARTHRO · SPIN · LIFT

MBST magnetic resonance treatment unit for: **arm, elbow, hand, finger, leg, knee, foot and toes**

The rollable and multi-adjustable therapy device allows the treatment of patients of almost any age and body size.

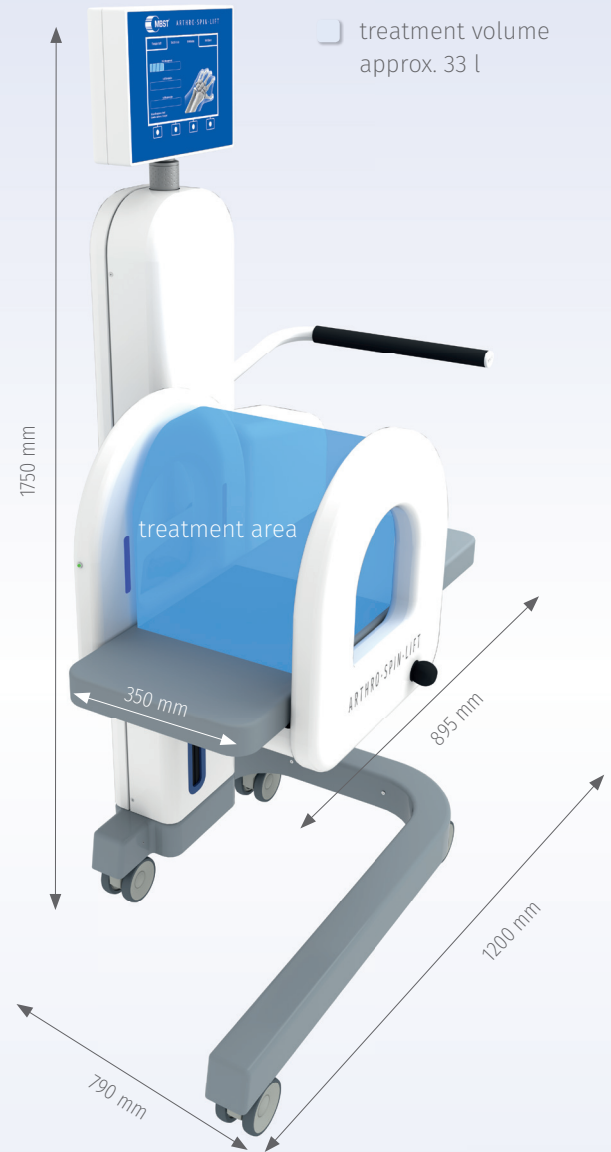

The body part to be treated can always be optimally positioned due to the variability of the vertically, horizontally and tilt-adjustable magnetic resonance unit.

During the therapy unit, the patient can sit comfortably in the armchair or on a treatment couch and even in a hospital bed.

ARTHRO-SPIN-LIFT was developed for the gentle and safe treatment of multiple indications around the musculoskeletal system. For example degenerative diseases like osteoarthritis, disorders of bone metabolism, acute and chronic injuries.

The attending physician defines the necessary number of therapy units depending on the indication and severity of the damage.

One therapy session lasts for 60 minutes. As long as the body part treated remains within the treatment area, the patient is free to move. He can for instance read, listen to music or even sleep during the therapy.

MADE IN GERMANY

The patented medical technology of the MBST therapy device complies with current EU norms and can be used for all age groups.
